Art Unit: 2614

1. Claims 11-19 are objected to because of the following informalities: in line 10 of claims 11 and 17, "a" (second occurrence) should be deleted. Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Harwood et al. (cite by applicant on the 1449 form).

The receiver of Harwood (noting particularly Fig. 1) includes on-screen display capabilities (e.g. elements 60, 62), wherein the system further includes OSD switch 66 (provided per separate RGB stages 20a – 20c) that receives respective RGB cutoff parameters from translator 64 controlled by disabling (cutoff) circuit 58; a video mixer per stage (elements 30, 32) that mix the color and the OSD data by way of switch 66 to provide a mixed cutoff signal; and a cutoff circuit 34 coupled to CRT 25 that, with bias circuit 36, receives the mixed RGB cutoff signal to adjust the brightness level of the CRT for aging, whereby the RGB cutoff signal contains a brightness component that sets the brightness during characteristic aging of the CRT (col. 1 lines 34-40; col. 4 lines 15-18), thereby meeting claim 1.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person

Art Unit: 2614

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Harwood et al. in view of Amaya et al. (also cited on the 1449 form).

Amaya also controls cutoff of a CRT to prevent the effects of long-term beam current effects, and includes a microcomputer (microcontroller) 25 for the various circuit stages (Figs. 3, 4).

Although Harwood does not explicitly disclose circuitry used to control the processing, in any general sense control is inherent, and it would have been obvious to one of ordinary skill in the art to provide any suitable circuitry to carry out the various processing throughout any and all stages of signal processing to thereby ensure proper operation, such as a microcomputer as shown by Amaya.

As for claim 6, the microcomputer of Harwood as modified by Amaya would accordingly preset the OSD device for aging (at any initialization stage).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

6. Claims 2, 3, 5 and 7-20 appear allowable over the prior art
